The City of Everett is happy to announce a new classroom surface and wastewater workshop for grades 9-12.

This workshop requires lab stations with running water and is a 50 minute lesson.

Students create wastewater in the lab, learn where it goes and examine how wastewater is treated.

The workshop provides a hands-on, in-depth look at the wastewater treatment process. Students learn what pollutants can and can't be removed during the cleaning process. They also learn that what can't be removed eventually ends up in Puget Sound.

Key lesson messages:

What happens to what goes down the drain

Why controlling what goes down the drain is important

How individual choices impact the ecosystem and Puget Sound

"I like helping the students understand where their wastewater goes and what they can do at home or at school to prevent certain items from entering the wastewater system."

- Triangle Teacher
